

Sorting is an arrangement of data in a particular order on the basis of some parameter.

Ex:- 1       $\{ 2, 3, 9, 12, 17, 19 \}$

Parameter  $\rightarrow$  Inc magnitude of elements.

Ex:- 2       $\{ 19, 6, 5, 2, -1, -19 \}$

Parameter  $\rightarrow$  Dec, magnitude of elements

Quiz 1

$\{ 1, 13, 9, 6, 12 \}$

Cont of Factors  $\rightarrow$  1, 2, 3, 4, 6

Sorted.

Q:-1 Given an array of  $N$  integers, minimise the cost to empty given array where cost of removing an element is equal to sum of elements left in array

<u>Ex:-</u>	<u>Cost</u>		<u>Cost</u>
$A = \{2, 1, 4\}$	7.	$A = \{2, 1, 4\}$	7
$\{2, 4\}$	6	$\{2, 1\}$	3
$\{2\}$	2	$\{1\}$	1
	<u>15</u>		<u>11</u>

<u>Quiz 2</u>	<u>Cost</u>
$\{4, 6, 1\}$	11
$\{4, 1\}$	5
$\{1\}$	1
	<u>17</u>

## Quiz 3

$$\{3, 5, 1, -3\}$$

Cost

$$6$$

$$\{3, 1, -3\}$$

$$1$$

$$\{1, -3\}$$

$$-2$$

$$\{-3\}$$

$$\frac{-3}{2}$$

## Approach

Generalisation

$$\begin{matrix} 0 & 1 & 2 & 3 \\ [a & b & c & d] \end{matrix}$$

Remove a

$$a + b + c + d$$

Remove b

$$b + c + d$$

Remove c

$$c + d$$

Remove d

$$d$$

$$a + 2b + 3c + 4d$$

$$a \geq b \geq c \geq d$$

## # Pseudo Code

```
int calculate_cost(int arr[]) {
```

```
    reverse_sort(arr); //  $N \log N$ 
```

```
    int ans = 0;
```

```
    for (int i = 0; i < N; i++) {
```

```
        | ans += (i+1) * arr[i];
```

```
    }
```

```
    return ans;
```

```
}
```

A - { 3, 5, 1, -3 }

↓

0    1    2    3

{ 5, 3, 1, -3 }

i

ans = 0

5

+ 6

+ 3

- 12

2

T.C  $\rightarrow O(N \log N)$

S.C  $\rightarrow O(N)$

Q-2. Given an array of distinct elements of size  $N$ , find the count of noble integers.

Note:-  $arr[i]$  is noble if count of elements smaller than  $arr[i] = arr[i]$

Ex:-  $\{ \overset{0}{1}, \overset{1}{-5}, \overset{2}{3}, \overset{3}{5}, \overset{4}{-10}, \overset{5}{4} \}$

Ans = 3.

Quiz 4

$\{ \overset{0}{-3}, \overset{1}{0}, \overset{2}{2}, \overset{5}{5} \}$

Ans = 1.

# Brute Force

```
int findNoble (int arr) {
```

```
    int ans = 0;
```

```
    for (i = 0; i < N; i++) {
```

```
        int count = 0;
```

```
        for (j = 0; j < N; j++) {
```

Update  
count

```
            if (arr[j] < arr[i]) {
```

```
                count++;
```

3 3

```
            if (count == arr[i]) {
```

```
                ans++;
```

3

3

```
    return ans;
```

TC  $\rightarrow O(N^2)$

SC  $\rightarrow O(1)$

Ex: {<sup>0</sup>-3, <sup>1</sup>-1, <sup>2</sup>0, <sup>3</sup>1, <sup>4</sup>2, <sup>5</sup>5}

# Optimisation

```
int findNoble (int arr) {  
    sort(arr); // N lg N  
    int ans = 0;  
    for (i = 0; i < N; i++) {  
        if (i == arr[i]) // N  
            ans++;  
    }  
    return ans;  
}
```

$m + N$

$N \lg N$   
 $N$

T.C.  $\rightarrow O(N \lg N)$

S.C.  $\rightarrow O(N)$

Q:- What if the elements are not distinct?

Quiz 5

$$A = \{ \overset{0}{-10}, \overset{1}{1}, \overset{2}{1}, \overset{3}{3}, \overset{4}{100} \}$$

ans = 3.

Quiz 6

$$A = \{ \overset{0}{-10}, \overset{1}{1}, \overset{2}{1}, \overset{3}{2}, \overset{4}{4}, \overset{5}{4}, \overset{6}{4}, \overset{7}{8}, \overset{8}{10} \}$$

an = 5.

Quiz 7

$$A = \{ \overset{0}{-3}, \overset{1}{0}, \overset{2}{2}, \overset{3}{2}, \overset{4}{5}, \overset{5}{5}, \overset{6}{5}, \overset{7}{5}, \overset{8}{8}, \overset{9}{8} \}$$

$i$

$\begin{matrix} 10 & 11 & 12 & 13 \end{matrix}$

## Solution

1. If the current element is same as previous element, the total no. of smaller elements of current element = those of previous element.

2. If the current element is not same as previous element,  $i$  will tell us the no. of smaller elements than  $A[i]$ .

# Code → TODO - H.W.

8:25

# Selection Sort

Aug :  $\{ \overset{0}{5}, \overset{1}{6}, \overset{2}{4}, \overset{3}{2} \}$

## # Code

```
for (i = 0; i < N; i++) {
    minIndex = i;

    for (j = i + 1; j < N; j++) {
        if (arr[j] < arr[minIndex]) {
            minIndex = j;
        }
    }

    swap(arr[minIndex], arr[i]);
}
```

T.C  $\rightarrow O(N^2)$

S.C  $\rightarrow O(1)$

$i = 0$ ;  $\minIndex = 0$ ;  $j = 1$

$\{ \overset{0}{5}, \overset{1}{6}, \overset{2}{4}, \overset{3}{2} \}$

$i = 1$ ;  $\minIndex = 2$ ;  $j = 3$

# Insertion Sort

Ex:-

# Code

```
for (i = 1; i < N; i++) {
```

```
    for (j = i-1; j >= 0; j--) {
```

```
        if (arr[j] > arr[j+1]) {
```

```
            swap(arr[j], arr[j+1]);
```

```
        }  
    }  
    else { break; }
```

T.C  $\rightarrow O(N^2)$   
S.C  $\rightarrow O(1)$

{4, 7, 8, 9, 10}

In place Sorting  $\rightarrow$  Where SC is  $O(1)$

Insertion Sort  
 $\downarrow$

$\{4, 7, 8, 9, 10\}$ .

$O(N)$  iterations for already sorted array.

Best Case T.C.

TODO →. What is best case T.C. for selection sort?
